

MODEL SERIES WFPF2800 & SERIES WFPF3800

Universal Valve-in-Head Whole House Filtration System Replacement Cartridges: WFPFC300, WFPFC400, WFPFC500, WFPFC800, WFPFC900 Series

COMPONENT

Tested and Certified by Water Quality Association (WQA) against NSF/ANSI Standard 42 for materials safety and structural integrity requirements only.

Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after this filter system. Maximum operating temperature 38° C/100° F. Operating pressure 30-100 psi/207-690 kPa.

CAUTION

READ BEFORE INSTALLING!

A pressure regulator **must be installed** before the filter, if water pressure will at any time exceed the

**MAXIMUM RATING OF
100 PSI (690 kPa).**

It is recommended that the pressure regulator be set at 75 psi (517 kPa) or less. This will guard against the pressure exceeding the maximum rating at any time.

HANDLE WITH CARE.

Dropping, hitting or scratching causes excessive stress to clear material, resulting in failure and leakage.

Protect against freezing. Failure to do so may result in cracking and leakage.

Do not install in an area where solvents or sprays can reach filter. Cracking and failure may result.

Do not install outdoors in direct sunlight.

If system experiences pressure surges, install a pressure regulator before the filter to keep pressure below the 100 psi maximum.

Do not install filter in applications where failure or leakage would cause damage.

Misapplication of Clear Housings will void any warranty.

NOTICE: We strongly recommend that the entire filter system be replaced every 5 years to guard against leaks caused by wear and tear.

Ensure the correct length filters and replacement filters are used to avoid stress and strain on housing.

A leak detector must be installed where high pressure, water hammer and pressure spikes are known or suspected to be present and where pressure is over 60 psi. **FAILURE TO DO THE ABOVE MAY RESULT IN HOUSING CRACKS, WATER LEAKAGE AND WATER DAMAGE.**
